Submission Date: 14/09/2025

1. Introduction

The Public Allegation Portal is a comprehensive digital platform designed to empower citizens by enabling them to report, track, and manage public complaints or allegations. It streamlines communication between citizens and administrative authorities, ensuring transparency, accountability, and efficiency in resolving civic issues. The system introduces a multi-level administrative hierarchy to handle complaints effectively at different governance levels.

2. Objectives

- To provide a secure, structured platform for citizens to report issues transparently.
- To allow real-time tracking, filtering, and monitoring of complaints.
- To ensure accountability by defining clear administrative roles (Master Admin, Client Admin, Department Admin).
- To promote digital transformation in public complaint management, reducing manual processes and paperwork.
- To provide analytics and insights for policy improvement based on complaint data.

3. Benefits

- Transparent and traceable complaint workflow.
- Improved accountability — every complaint is owned and tracked by a department or admin.
- Efficient communication and timely resolution through structured digital records.
- Reduction of paper-based records and errors.
- Insightful dashboard analytics for administrators.
- Encourages citizen participation in improving governance quality.

4. Features

Core Features:

- Multi-tier admin hierarchy (Master, Client, Department)
- Complaint submission with file uploads (photo, PDF, audio, video)
- Real-time complaint tracking and filtering
- User and admin dashboards
- CRUD functionality for users, departments, and complaints

Additional Features:

- Email/SMS notifications on status updates
- Public announcement/news section
- Secure authentication and role-based access
- Search and filtering capabilities across all complaints

5. Existing / Similar Projects

The project concept is inspired by existing e-governance platforms such as:

- City corporation grievance redressal systems
- National complaint tracking portals (e.g., India's CPGRAMS, Bangladesh Gov't Grievance Portal)
- University or campus complaint submission tools

However, the Public Allegation Portal aims to go beyond traditional portals by offering multi-level administrative

layers, citizen-friendly UI, and real-time engagement features.

6. Page Flow / UI Flow / Navigation Logic

User Interface Flow: Master Admin: • Access all data, clients, and user accounts. • Manage site-wide settings and announcements. Client Admin: • Login, manage own departments and department admins. • View all complaints under their jurisdiction. Department Admin: • Manage complaints assigned to the department. • Update complaint status and track progress. User: • Register/login, file complaints with attachments. • View, edit, and track complaint progress.

7. Functionality Details

Master Admin: • Full CRUD access to clients, users, and complaints. • Generate system-wide reports and statistics. Client Admin: • Add/view/edit departments and department admins. • Assign and monitor departmental responsibilities. Department Admin: • Accept, process, and close complaints relevant to their department. • Update complaint status and leave resolution comments. User Panel: • Register/login securely. • File complaints with organization/department selection. • Track all complaints and receive live updates via notifications.

8. Technology Stack

Frontend: React (TailwindCSS for styling, Lucide icons for UI) Backend: Node.js (Express.js) Database: MongoDB Other Tools: Postman (API testing), GitHub (version control), JWT (authentication), Multer (file uploads)

9. Expected Outcome

A fully responsive, secure, and scalable web portal that facilitates transparent and efficient public complaint management. The system promotes accountability across multiple administrative layers, ensures user data privacy, and enables quick complaint resolution with complete tracking and analytics.

10. Future Enhancements (Added Section)

• AI-powered chatbot integration for instant user support. • Data analytics dashboard for identifying complaint trends. • Integration with national ID systems for verified citizen submissions. • Mobile app version with offline support. • Multilingual interface (English, Bangla).

11. Security & Privacy Measures (Added Section)

- Role-based access control to prevent unauthorized operations.
- Data encryption (JWT, HTTPS, environment-based secrets).
- File upload restrictions and antivirus scanning.
- Periodic backup and recovery system.
- Compliance with data protection policies (GDPR-inspired).

12. Conclusion

The Public Allegation Portal is a crucial step toward transparent and participatory governance. It integrates advanced technology to bridge the gap between citizens and public authorities, enabling faster issue resolution and fostering trust through transparency and accountability.
